

You've chosen to have your cataracts removed and your vision restored at one of the finest surgical centers in the country. Here, skilled surgeons use a variety of advanced technologies that can enhance the accuracy of your vision correction, and even reduce the chances of you needing eyeglasses after your recovery.

**It's not just what your surgeon knows.
It's when he or she knows it.**

One innovative technology used in this elite practice is called ORange®, a state-of-the-art device that is unique in its ability to provide the surgeon an unprecedented new level of valuable information about your eye – during the procedure – which is precisely when it's needed most. When ORange is included as part of your procedure, you'll have the confidence of knowing the most advanced technology available has been used to help ensure you receive the best vision results possible.

Know!

It's not only what you know.
It's when you know it.

Introducing ORange®.

The latest technology developed to enhance your vision correction procedure – precisely when it's needed most.

What is ORange?

ORange is a sophisticated device used to provide real time measurements of the patient's eye—during surgery, not possible with today's conventional instruments. At any point, as the surgeon can easily take a measurement, which is then analyzed by ORange's advanced technology to provide specific information used to optimize decision-making in correcting the vision of that eye. Prior to ORange, surgeons were unable to assess the quality of vision during the procedure, and would often have to wait until weeks after the surgery to determine the accuracy of the surgical results.

The Benefits of ORange.

There are many important benefits to having ORange technology included as part of your vision correction procedure. These include:

- *ORange may help your surgeon achieve better results and provide you an improved quality of vision*
- *ORange gives your surgeon an added level of confirmation for an optimal outcome*
- *If you have astigmatism, ORange may improve the accuracy of your correction to help reduce the chance you'll need to wear eyeglasses after your procedure*

ORange. It's a clear choice.

If you would like to know more about how your vision correction can be optimized by choosing ORange as part of your procedure, ask your surgeon for further details or go to our website at www.operateorange.com. And learn how this innovative new technology can help ensure the best results possible.
